

AIM AND TARGETS

The aim of this course is to provide clinic-pathologic lectures and interactive case discussions. The faculty will illustrate several aspects of breast pathology, from histo-morphological aspects to molecular pathology. During the microscopic sessions the faculty will present several cases of rare or controversial diseases, and all participants are strongly encouraged to freely discuss the cases, in an informal and constructive way. Participants are also encouraged to bring their own unusual/problematic cases, along with a brief clinical history.
